

PIONEERING FUTURES: APPRENTICESHIPS AT NPL

Wed 7 Feb 2023 | 08.40am - 9.10am

Microsoft Teams Live* | FREE | For Keystage 3/4 Students

As part of National Apprenticeship Week connect with NPL apprentices past and present.

During this live talk for secondary students you will have the opportunity to hear from apprentices from the National Physical Laboratory which offers several different apprenticeships in science, engineering and business administration. The apprentices will discuss what it is like to be an apprentice at NPL, what they have learnt and what foundations they have built for their future.

A current apprentice will explore their day-to-day experience as they progress through the apprenticeship scheme, while past apprentices will talk about the skills they have developed and the career path that NPL has guided them on.

There will also be an opportunity to ask the apprentices questions via a live chat function.

**Microsoft Teams Live is a platform with safeguarding built in, including no enabled webcams or microphones and moderated chat function.*
